Pedro Moran

Frontend React Developer **+2 years** of experience

Currently working full-time at Crowdar with a development team, building internal products for the company.

In charge of:

- Develop highly efficient user interface components.
- Analysis, implementation and testing of new functionalities.
- Product delivery.

Experience

Crowdar

Frontend Developer | January 2021 - Present

- Participation in the development of **Lippia Test Manager** with a team guided by scrum methodology, in where I have helped creating from scratch an application for the manual and automated testing area.

    I implemented solutions such as:
    - More than 15 pages using static routing, dynamic routing and authentication.
    - Structure and editing of IDE-like files with connection to repositories in external tools (Gitlab, Github, Bitbucker).
    - Different types of funcional layouts (carousel, dragging, sliders) in combination of comunication with external network apis (fetching).
    - Migration from React v17 to React v18 and migration from Create React App (CRA) to Vite.
    - Form and tables multifunctional with api connections.
    - Refactoring to keep scalability and performance.
    - Regionalization using i18next.

    Technologies: ReactJs, NextJs, Vite, JavaScript, TypeScript, CSS3, TailwindCSS, Material UI.

- Entire development of the **Crowdar Academy** website, wich is dedicated to promote courses and services for the testing and devops area (Link: https://crowdar.academy).

    I implemented solutions such as:
    - Static and dynamic pages using Static Site Generation (SSG).
    - Resposive web design using media queries, CSS Grid and FlexBox.
    - Implementation of styles and layouts based on figma designs.

    Technologies: ReactJs, NextJs, JavaScript, TypeScript, CSS3, SASS.

Freelance

Frontend Developer | September 2023 - Present

- Experience as a freelancer maintaining and scaling frontend apps, working with a flexiable time and independently.

  I implemented solutions such as:
    - Bug fixing on UI components rendering and states management.
    - Data fetching and state management with Redux.
    - Refactorization of code with the best React practices and techniques.
    - New pages and routes.
    - Layout components such as tables, pagination and graphics.
